New Stories & Product Information

Introducing Hunter's latest addition to our new Micro Irrigation line

- Our Professional Landscape Drip Lines have an operating pressure range of 15 to 50 psi (1.0 – 3.5 BAR), and fit common Netafim type 17mm barbed fittings. You'll find they're UV resistant, and the tubing is brown for landscape camouflage.
- The new product helps apply water slowly and evenly, thus giving plant materials consistent distribution. With application rates that enable water to soak in gradually below the surface, the product eliminates issues such as runoff, pattern distortion from wind, and wasted water on hardscapes.
- The PLD comes in lengths of 100', 250' and 1000'. The flow rate is 0.4 GPH, 0.6 GPH, and 1.0 GPH with spacing that spans 12", 18" and 24".
- Better still, the Professional Landscape Drip Line is competitively priced with other manufacturers' products, and still offers access to valuable PCP Points. Our product comes with a two year standard warranty.

PGP® Blue Nozzles

A marriage of superior coverage and the industry standard for visual appearance

RZWS – Root Zone Watering System

Provides both near surface and deep root watering for healthy shrubs and trees

Hunter's Residential Product Line-up: The Best of the Best

The days of Hunter being "just a rotor company" are long gone. Today, more and more irrigation professionals have discovered that for top quality residential systems, all you need is one brand to ensure that you're installing the best products possible. That brand is Hunter.

No Power? No Problem! Use Hunter Battery-Operated Controllers for a Variety of Situations

Traffic medians, roundabouts, rural properties, construction sites,

municipal parks...they're all places that typically lack a traditional source of electric power. Which means they're the type of sites where you would have to make do without an automatic irrigation system.

Don't Let Federal Works Jobs Intimidate You When it Comes to Getting Paid

The thought of having to go after money you are owed on a federal government job can be daunting. However, the reality is that collection on a federal works job is often less complex and more streamlined with the benefit of longer time frames within which to utilize your collection remedies than on either private works or state public works jobs.

Root Zone Watering System Starts New Plantings Right with Near Surface and Deep Root Irrigation

Hunter is introducing a new line of irrigation products designed specifically for irrigating trees and shrubs.

New Two-Piece Ratchet: Pro-Spray®, Institutional Spray Now Easiest to Adjust, Most Precise

Introducing our new two-piece ratchet design that takes us past the competition.

IMMS 2.0: Updates Make Hunter's Affordable Central Control Even More Appealing to Contractors

Hunter is proud to introduce the latest generation of central control.

Flat Rate Pricing

The flat rate includes labor, materials, and any equipment needed to perform the task. Essentially, you're providing the client with a "grocery" list of sorts from which to choose services and products.

Pro-C, Hunter's Top-Selling Controller, Adds New Product Enhancements

Boasting a complete line of modular, full-featured controllers for residential and light commercial applications, the Pro-C has been one of Hunter's best-selling products since it was introduced.

Hunter Modular Controllers: The Cost-Efficient Solution for Any Size Landscape

From the Pro-C to the ICC to the award-winning ACC, the complete family of Hunter modular controllers has been designed to handle landscape needs of virtually every size and scope.

Hunter Products the Installation Choice, On the Road (George Bush Turnpike) or at Home (Toyota)

Park)

Here's a quick look at two very different types of installations in two very different parts of the country. The common bond: both rely on high quality Hunter products to keep the landscaping lush and beautiful.

ACC Communications Modules Make it Easy to Step Up to Central Control

As Hunter's most powerful controller ever for the command of large and sophisticated sites, the ACC offers the ultimate in convenience and versatility.

Controller Microprocessor Lock-up: What it is and How to Fix it

A common problem with all brands and types of solid-state controllers is "microprocessor lockup." This is where, after a power surge or spike, the microprocessor stops processing data.

Verbal Agreements: Beware! Still Better to Get it in Writing

It used to be a handshake and the word of a person was all that was needed in business. Unfortunately, that day is long gone and those who still conduct business without written contracts all too often find themselves in legal battles to get paid.
